The *second* Computing and Innovation Project weekly meeting will be held in **Ingkarni Wardli** at **2:30 pm on Tuesday 7 March 2017**.

Agenda

Chair: Tianxu Xi

1   Apologies

.

None

2   Group members

.

1674472 Tianxu Xi

1692335 Changchang Liu

3   Introduction

Every team member will briefly introduce the process we did last week and work we will do next week.

3.1   Elicit Functional Requirements

1. Question 1: Is there any easier way to get all variables in a program? we tried to filtrate all things but variables.

2. Question 2: How can we get the values of all variables in every line? We tried to put "printf" after each line. How can we use this way to work out loop structure?

3. Question 3: For php, how can we get every value that students fill in the form?

4. Question 4: We try to generate a new file that hold all variables and the values in every statement. Upload this file and use php to compare the values in this file with the results that students fill in. Is that viable?

3.2 Elicit Design Requirements

1. Question 1: Do we need to create a login interface in browser by php?

4 Other Issues

Team member will confirm about the next meeting with supervisor.
